SIGAO DRIVE

SIGAO DRIVE

KUDOS

POWERED BY SILENCE

A revolutionary new crossover from Kudos Audio.

SIGAO DRIVE represents a new generation of crossover, never before seen in mainstream HiFi. Neither traditionally active nor truly passive, SIGAO DRIVE is an external crossover with no power supply, situated in front of the power amplifiers in the audio signal chain.

Utilising our masterfully simple methodology, SIGAO DRIVE transcends the performance of traditional active crossovers with our loudspeakers. And for the first time, it makes Kudos loudspeakers in active configuration compatible with virtually any audio brand on the market.

SIGAO DRIVE ensures the best possible experience with Kudos loudspeakers - the absolute pinnacle of Kudos listening.

Active Listening, Simplified.

As long-time champions of active listening, we've endeavoured to find a better and more efficient route to its many sonic benefits, by removing every non-essential component from the reproduction process.

This starts with the power supply. SIGAO DRIVE utilises new, high quality components and a unique PCB design that allow it to sit in the position of a conventional, active crossover - without a power supply. The result? A whole new level of Kudos excellence.

Infinite Compatibility.

Until now, Kudos loudspeakers in active configuration have only been compatible with a select handful of audio brands.

With SIGAO DRIVE, that's changing. SIGAO DRIVE is designed so that the amplifier output loading of the crossover can be adjusted to match the technical requirements of virtually any amplifier combination you wish to use. It means listeners are now given the option of near-infinite compatibility with Kudos loudspeakers.
